Key Facts

- 'All round the ground' project
- Specialist knowledge of complex systems
- On schedule – no need for 'extra time'

City of Manchester Stadium

The 'Eastlands' stadium, home to Manchester City FC, was a new build project that called for an in-depth knowledge of a variety of complex, integrated electrical systems.

Aspull installed a series of facilities, including services for the kitchens and corporate suites, as well as the advanced public address system, which employs 'voice-activated' technology.

We were also tasked with supplying an entire 'control interface' for the operation of all the lights and fire alarms, for which the latter demanded expert knowledge.

The work was all completed within the very tightest time constraints.

"Aspull put in a winning performance."
